

# PMT2 Panel Mount Power Supply

## PMT2 150W series / PMT-□V150W2C□□

# PMT2

### Highlights & Features

- Household appliance approvals according to IEC/EN 60335-1, IEC/EN 61558-1 and IEC/EN 61558-2-16
- Universal AC input voltage range
- No load power consumption < 0.3 W
- Low profile design: 30 mm height
- OVC III, Pollution Degree 3
- Wide operating temp -30°C ~70°C (Support -40°C cold start)
- Conforms to harmonic current IEC/EN 61000-3-2, Class A
- High MTBF > 700,000 hrs per Telcordia SR-332
- Compliance with SEMI-F47

### Safety Standards

CB Certified for worldwide use

**Model Number:** PMT-□V150W2C□□  
**Unit Weight:** 0.392 kg (0.864 lb)  
**Dimensions (L x W x H):** 159 x 97 x 30 mm  
 (6.26 x 3.82 x 1.18 inch)

### General Description

PMT 2<sup>nd</sup> generation (PMT2) power supplies is designed in a low 30mm profile and accepts universal AC input. The highly efficient convection cooling construction can operate from -30°C to 70°C. The single output model is competitively priced for general industrial and ITE applications. It complies to major safety approvals such as IEC/EN 60335-1, IEC/EN 61558-2-16, IEC 60950-1 & IEC/EN/UL 62368-1.

### Model Information

PMT2 Panel Mount Power Supply

| Model Number    | Input Voltage Range | Rated Output Voltage | Rated Output Current |
|-----------------|---------------------|----------------------|----------------------|
| PMT-12V150W2C□□ | 90-264 Vac          | 12 Vdc               | 12.5 A               |
| PMT-15V150W2C□□ |                     | 15 Vdc               | 10.0 A               |
| PMT-24V150W2C□□ |                     | 24 Vdc               | 6.5 A                |
| PMT-30V150W2C□□ |                     | 30 Vdc               | 5.0 A                |
| PMT-36V150W2C□□ |                     | 36 Vdc               | 4.3 A                |
| PMT-48V150W2C□□ |                     | 48 Vdc               | 3.3 A                |

1) Criteria A: Normal performance within the specification limits

2) Criteria B: Output out of regulation, or shuts down during test. Automatically restored to normal operation after test.

3) Criteria C: Output out of regulation, shuts down during test (Need to recycle AC power cord to normal operation after test)

4) Asymmetrical: Common mode (Line to earth)

5) Symmetrical: Differential mode (Line to line)

# PMT2 Panel Mount Power Supply

## PMT2 150W series / PMT-□V150W2C□□

### Block Diagram

### Device Descriptions

- 1) Input & Output terminal block connector
- 2) DC voltage adjustment potentiometer
- 3) DC OK control LED (Green)

**L x W x H:** 159 x 97 x 30 mm (6.26 x 3.82 x 1.18 inch)

UNLESS OTHERWISE SPECIFIED TOLERANCE OF DIMENSION ARE  $\pm 0.5$ .

## Wire AWG Table

| Current rating for PVC Wire AWG |       |       |      |
|---------------------------------|-------|-------|------|
| 6AWG                            | 52.5A | 20AWG | 6.5A |
| 8AWG                            | 37.5A | 22AWG | 5.0A |
| 10AWG                           | 29.0A | 24AWG | 3.5A |
| 12AWG                           | 22.5A | 26AWG | 2.5A |
| 14AWG                           | 16.5A | 28AWG | 2.0A |
| 16AWG                           | 12.0A | 30AWG | 1.5A |
| 18AWG                           | 9.0A  |       |      |

# PMT2 Panel Mount Power Supply

## PMT2 150W series / PMT-□V150W2C□□

### Engineering Data

#### Output Load De-rating VS Surrounding Air Temperature

**Fig. 1 De-rating for Horizontal Mounting Orientation**  
 > 50°C de-rate power by 2.0% / °C

#### Note

1. Power supply components may degrade, or be damaged, when the power supply is continuously used outside the shaded region, refer to the graph shown in Fig. 1 & Fig.2.
2. The PSU will be bouncing and start up time will not exceed 5s when ambient temperature at -30 °C
3. If the output capacity is not reduced when the surrounding air temperature >50°C, the device will run into Over Temperature Protection. When activated, power supply will latch off, until the surrounding air temperature is lowered or the load is reduced as far as necessary to keep the device in working condition, and require removal/re-application of input AC voltage in order to restart.
4. In order for the device to function in the manner intended, it is also necessary to keep a safety distance as recommended in the safety instructions while the device is in operation.
5. Depending on the surrounding air temperature and output load delivered by the power supply, the device can be very hot!

#### Output Load De-rating VS Input Voltage

- No output power de-rating for the input voltage from 100 Vac to 264 Vac

**Fig. 2 De-rating for AC Input Voltage**  
 < 100 Vac de-rate power by 1.33% / V

### Assembly & Installation

- Ⓐ Mounting holes for power supply assembly onto the mounting surface.  
The power supply shall be mounted on minimum 2 mounting holes using M3 screw minimum 5 mm (0.20 inch) length.
- Ⓑ This surface belongs to customer's end system or panel where the power supply is mounted.
- Ⓒ Connector

\* If the device has to be mounted in any other orientation, please leave a message via the [Contact Us](#) form.

- Use flexible cable (stranded or solid) of AWG No. 18-12. User should calculate and select the suitable wire specification (type/quantity/diameter) according to actual output current. The torque at the Connector shall not exceed 8 Kgf.cm. (6.94 lbf.in). The insulation stripping length should not exceed 0.275" or 7 mm. (Refer to Fig. 3).

### Installation of Mounting Accessories

Fig. 3 Assembly Reference

# PMT2 Panel Mount Power Supply

## PMT2 150W series / PMT-□V150W2C□□

- Only use M3 screw  $\leq 3$  mm (0.20 inch) through the base mounting holes. This is to keep a safe distance between the screw and internal components.
- Recommended mounting tightening torque: 4~7 Kgf.cm (3.47~6.08 lbf.in).

Fig. 4 Mounting Screw

### Safety Instructions

- If user's mounting orientation is not according to the recommended mounting orientations, please consult Delta for further information.
- To ensure sufficient convection cooling, always maintain a safety distance of  $\geq 50$  mm (1.97 inch) from all ventilated surfaces while the device is in operation.
- The device is not recommended to be placed on low thermal conductive surface. For example, plastics.
- The enclosure of the device can become very hot depending on the ambient temperature and load of the power supply. Do not touch the device while it is in operation or immediately after power is turned OFF. Risk of burning!
- Do not touch the terminals while power is being supplied. Risk of electric shock.
- Prevent any foreign metal, particles or conductors from entering the device through the openings during installation. It may cause: Electric shock; Safety Hazard; Fire; Product failure
- The power supply must be mounted by metal screws onto a grounded metal surface. It is highly recommended that the Earth terminal on the connector be connected to the grounded surface.

### Functions

#### Start-up Time

The time required for the output voltage to reach 90% of its final steady state set value, after the input voltage is applied.

#### Rise Time

The time required for the output voltage to change from 10% to 90% of its final steady state set value.

#### Hold-up Time

Time between the collapse of the AC input voltage, and the output falling to 95% of its steady state set value.

#### ■ Graph illustrating the Start-up Time, Rise Time, and Hold-up Time

## PMT2 150W series / PMT-□V150W2C□□

### Inrush Current

Inrush current is the peak, instantaneous, input current measured and, occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

### Overload & Overcurrent Protections (Auto-Recovery)

The power supply's Overload (OLP) and Overcurrent (OCP) Protections will be activated when output current exceeds 110% of  $I_o$  (Max load). In such occurrence, the  $V_o$  will start to droop and once the power supply has reached its maximum power limit, the protection is activated and the power supply will go into "Hiccup mode" (Auto-Recovery). The power supply will recover once the fault condition of the OLP and OCP is removed and  $I_o$  is back within the specifications.

It is not recommended to prolong the duration of  $I_o$  when it is < 110% but > 100%, since it may cause damage to the PSU.

### Short Circuit Protection (Auto-Recovery)

The power supply's output OLP/OCP function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode", as shown in the illustration in the OLP/OCP section on this page. The power supply will return to normal operation after the short circuit is removed.

### Dynamic Response

The power supply output voltage will remain within  $\pm 10\%$  of its steady state value, when subjected to a dynamic load from 0% to 100%.

### Overvoltage Protection (Latch Mode)

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications defined on under "Protections". Power supply will latch, and require removal/re-application of input AC voltage in order to restart.

**The power supply should be latch, and require removal /re-apply of input AC voltage in order to restart.**

### Over Temperature Protection (Latch Mode)

As described in Engineering data section, the power supply also has Over Temperature Protection (OTP). In the event of a higher operating temperature at 100% load, the power supply will run into OTP when the operating temperature is beyond what is recommended in the de-rating graph. When activated, the output voltage will go into latch mode until the temperature drops to its normal operating temperature as recommended in the de-rating graph.
