Programming Tools

SDPTDV05UAx

SDPTDV05UAx is a multi-interface kit consist of DALI and DMX/RDM. This kit can be used as a controller for setting and querying standard DALI and DMX/RDM commands through GUI software. It can also be used as a programming tool similar to PTDV05UB. Simply connect to LED driver via DALI or DMX/RDM for reading and writing various setting parameters.

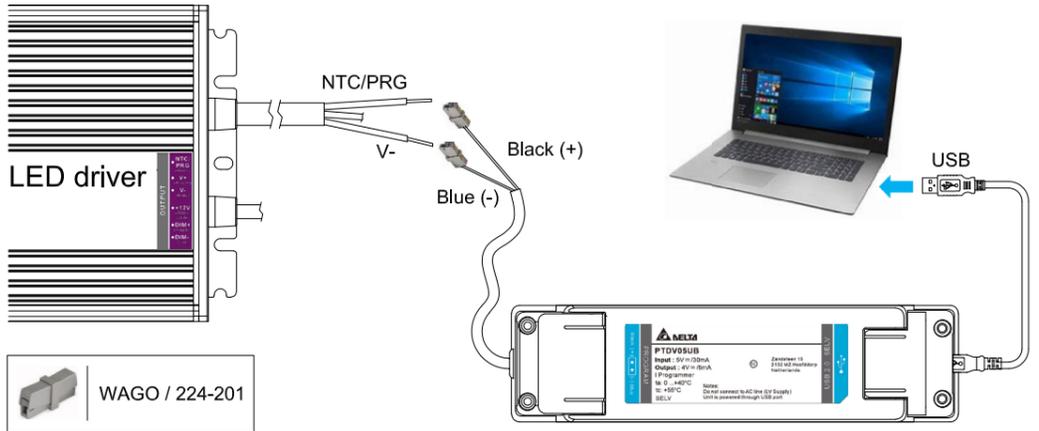

- Build-in DALI bus power supply for up to 50mA (around 25 DALI control gears)
- The DALI interface is polarity sensitive, and the LED driver must be powered from the external AC power supply
- DMX/RDM
- upport driver Firmware Update function

PTDV05UB

PTDV05UB is a custom designed two wired programming tool used for reading and writing various setting parameters, this is one of GUI software supported interfaces called "iProgramming".

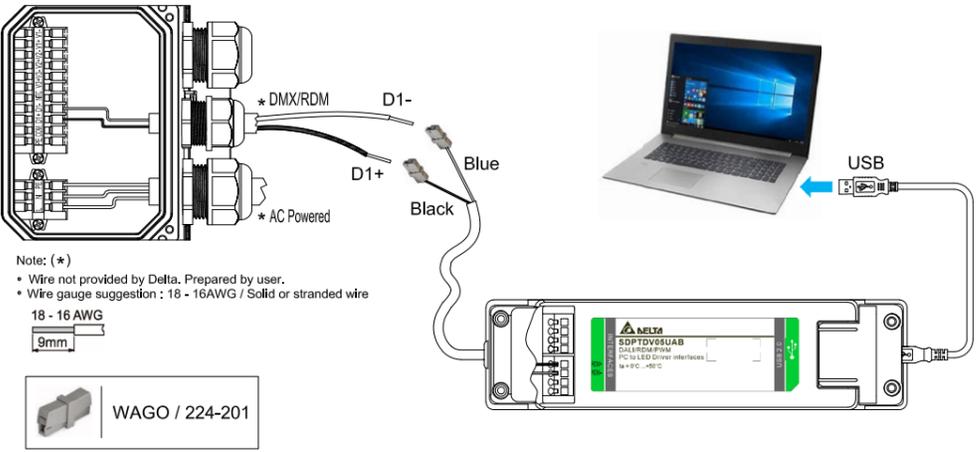

- Simple two wired touch and program
- No AC mains power on is needed for LED driver

Integrated Lighting Studio

The Integrated Lighting Studio (ILS) consist of four major functions: DALI Control, Programming, Power Meter and Firmware Update. All functions are integrated in one single GUI to ease the design efforts for evaluating Delta's LED driver. The executable GUI and user manual can be downloaded from www.deltaww.com/ILS

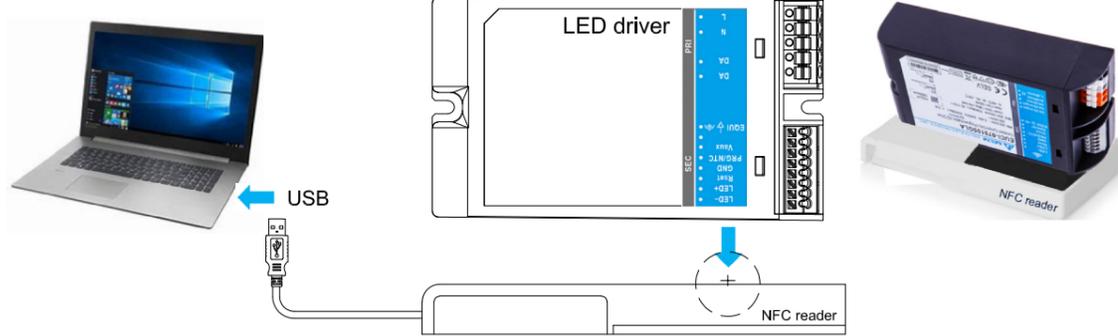

- DALI Control supports all DALI-2 command for Device Type of DT6 and DT8
- Programming supports output current setting and varied protection functions
- Power Meter is based on IEC 62386 part 252
- Firmware Update for DALI-2 models (support only EUCI LITE and EUCI PRE)

CPR30-USB & ISC.PRH101-USB

CPR30-USB and ISC.PRH101-USB are NFC reader/writer manufactured by FEIG Electronics. Both supported by GUI software for reading and writing various setting parameters.

- No wiring to LED driver is needed
- No AC mains power on is needed for LED driver
