

PMR Panel Mount Power Supply

PMR 600 W series / PMR-□V600W1BT

PMR

Highlights & Features

- Universal AC input voltage
- Built-in active PFC and conforms to harmonic current IEC/EN 61000-3-2, Class A and Class D
- Built-in Remote ON/OFF and Remote Sense
- 1U design: 41 mm height
- Household appliance approvals according to IEC/EN 60335-1, IEC/EN 61558-1 and IEC/EN 61558-2-16
- Wide operating temp -40°C ~70°C

Safety Standards

CB Certified for worldwide use

Model Number: PMR-□V600W1BT
Unit Weight: 1.2 kg (2.65 lb)
Dimensions (L x W x H): 225 x 124 x 41 mm
(8.86 x 4.88 x 1.61 inch)

General Description

PMR Series 600 W power supply offers the nominal output voltage of 12 V / 24 V / 36 V / 48 V across a wide operating temperature range from -40°C to +70°C and obtains shock and vibration certification IEC 60068-2. The product is designed with 1U low profile and comes with a universal AC input voltage ranging from 90 Vac to 264 Vac. The PMR series is made for installation in limited spaces. Its built-in active PFC circuit provides high power factor values and conforms to harmonic current emission standards IEC/EN 61000-3-2, Class A and Class D.

Model Information

PMR Panel Mount Power Supply

Model Number	Input Voltage Range	Rated Output Voltage	Rated Output Current
PMR-12V600W1BT	90-264 Vac (127-375 Vdc)	12 Vdc	50.0 A
PMR-24V600W1BT		24 Vdc	25.0 A
PMR-36V600W1BT		36 Vdc	16.6 A
PMR-48V600W1BT		48 Vdc	12.5 A

Model Numbering

Engineering Data

Output Load De-rating VS Surrounding Air Temperature

Fig. 1 De-rating for Horizontal Mounting Orientation
> 50°C de-rate power by 2.0% / °C

Note

1. Power supply components may degrade, or be damaged, when the power supply is continuously used outside the shaded region, refer to the graph shown in Fig. 1 & Fig. 2.
2. The power supply will have long rise time when the ambient temperature range is -30°C to -40°C.
3. If the output capacity is not reduced when the surrounding air temperature >50°C, the device will run into Over Temperature Protection. When activated, power supply will latch off, until the surrounding air temperature is lowered or the load is reduced as far as necessary to keep the device in working condition, and require removal/re-application of input AC voltage in order to restart.
4. In order for the device to function in the manner intended, it is also necessary to keep a safety distance as recommended in the safety instructions while the device is in operation.
5. Depending on the surrounding air temperature and output load delivered by the power supply, the device can be very hot!

Output Load De-rating VS Input Voltage

- No output power de-rating for the input voltage from 100 Vac to 264 Vac & 127 Vdc to 375 Vdc

Fig. 2 De-rating for AC Input Voltage
< 100Vac de-rate power by 1% / V (90% load @ 90 Vac)
No de-rate power for DC Input

PMR 600 W series / PMR-□V600W1BT

Assembly & Installation

- Ⓐ Mounting: Fig. 3 shows the mounting hole locations for power supply assembly onto a metal mounting surface.
- Ⓑ This surface belongs to customer's end system or panel where the power supply is mounted.
- Ⓒ Connector

* If the device has to be mounted in any other orientation, please leave a message via the [Contact Us](#) form.

- Use flexible cable (stranded or solid) of AWG No.14-10. User should calculate and select the suitable wire specification (type/quantity/diameter) according to actual output current. The torque at the Connector shall not exceed 12.4 Kgf.cm. (10.54 lbf.in). The insulation stripping length should not exceed 0.275" or 7 mm. (Refer to Fig. 3).

Installation of Mounting Accessories

PMR Panel Mount Power Supply

PMR 600 W series / PMR-□V600W1BT

- Only use M4 screw ≤ 3 mm (0.20 inch) through the base mounting holes. This is to keep a safe distance between the screw and internal components.
- Recommended mounting tightening torque: 4~5 Kgf.cm (3.47~4.33 lbf.in).

Fig. 4 Mounting Screw

Safety Instructions

- If user's mounting orientation is not according to the recommended mounting orientations, please consult Delta for further information.
- To ensure sufficient convection cooling, always maintain a safety distance of ≥ 50 mm (1.97 inch) from all ventilated surfaces while the device is in operation.
- The device is not recommended to be placed on low thermal conductive surface. For example, plastics.
- The enclosure of the device can become very hot depending on the ambient temperature and load of the power supply. Do not touch the device while it is in operation or immediately after power is turned OFF. Risk of burning!
- Do not touch the terminals while power is being supplied. Risk of electric shock.
- Prevent any foreign metal, particles or conductors from entering the device through the openings during installation. It may cause: Electric shock; Safety Hazard; Fire; Product failure
- The power supply must be mounted by metal screws onto a grounded metal surface. It is highly recommended that the Earth terminal on the connector be connected to the grounded surface.

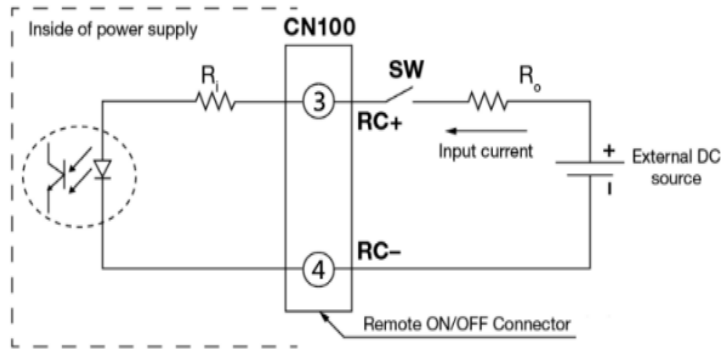

PMR Panel Mount Power Supply

PMR 600 W series / PMR-□V600W1BT

Functional Manual

Remote ON/OFF Function

You can remotely control the power supply unit to turn ON/OFF by using an external DC source. Follow the DC power source voltage and current limiting defined in the table below.

Built-in Resistor R _i (ohm)	Voltage Between RC+ and RC- (V)		Input Current (mA)
	Output ON	Output OFF	
1000	0-0.5	5-12.5	20 Max

- Notes**
- Remote ON/OFF circuits are isolated from input, output and PE.
 - Please check if the polarity of the wire connector is the same as the external DC source. If not, the power would not turn on and the internal components may be damaged.
 - You do not need an external resistance R_O for current limit while the output voltage of external DC source is within the range of 5-12.5 V. If the output voltage exceeds 12.5 V, please use the following equation for the value of current limit resistance R_O.

$$R_o = \frac{V_{cc} - (3.5 + 0.006R_i)}{0.006}$$

Remote Sensing Function

This function compensates voltage drop of wiring from output terminals to load terminals. Connect “RS+” of CN100 terminal to “V+” terminal of load and “RS-” of CN100 terminal to “V-” terminal of load with sensing wires. The total compensates voltage drop up to 0.5 V.
* In case that output wiring is too long and wire AWG is too small, OVP may be triggered, please contact us for more details via the [Contact Us](#) form.

PMR Panel Mount Power Supply

PMR 600 W series / PMR-□V600W1BT

Functions

Start-up Time

The time required for the output voltage to reach 90% of its final steady state set value, after the input voltage is applied.

Rise Time

The time required for the output voltage to change from 10% to 90% of its final steady state set value.

Hold-up Time

Time between the collapse of the AC input voltage, and the output falling to 95% of its steady state set value.

■ Graph illustrating the Start-up Time, Rise Time, and Hold-up Time

Inrush Current

Inrush current is the peak, instantaneous, input current measured and, occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

Dynamic Response

The power supply output voltage will remain within $\pm 10\%$ of its steady state value, when subjected to a dynamic load from 10% to 100%.

PMR Panel Mount Power Supply

PMR 600 W series / PMR-□V600W1BT

Overload & Overcurrent Protections (Continuous Current)

The power supply offers constant current limit protection for inductive and capacitive load applications when output current range is 105~150% of I_o (Max load) and output voltage large than 80%. Upon such an occurrence, the V_o (output voltage) will start to droop. Once the power supply has reached its maximum power limit, the protection will be activated; and, the power supply will operate in continuous current. The power supply will recover once the cause of OLP or OCP is removed, and I_o (output current) is back within the specified range.

Short Circuit Protection (Auto-Recovery)

The power supply's output OLP/OCP function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode", as shown in the illustration in the OLP/OCP section on this page. The power supply will return to normal operation after the short circuit is removed.

Overvoltage Protection (Latch Mode)

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications defined on under "Protections". Power supply will latch, and require removal/re-application of input AC voltage in order to restart.

The power supply should be latch, and require removal /re-apply of input AC voltage in order to restart.

Over Temperature Protection (Latch Mode)

As described in Engineering data section, the power supply also has Over Temperature Protection (OTP). In the event of a higher operating temperature at 100% load, the power supply will run into OTP when the operating temperature is beyond what is recommended in the de-rating graph. When activated, the output voltage will go into latch mode until the temperature drops to its normal operating temperature as recommended in the de-rating graph.
